<div align="center">Module 3, 3-2-1</div>

Learned

1. How to use ggplot for data visualization.
2. This week clarified some dplyer functions for me, such as group_by and summarize.
3. I have a better understanding of how to work with R data frames after more practice with them in the homework.

Interesting

1. I found the difference between accuracy and precision, and the way that difference can be used to make misleading statistics interesting.
2. The way ggplot works, it makes plotting an additive formula, adding elements on top of each other to build a plot.

Questions

1. Some functions are still giving me trouble, such as mutate, I feel like I don't have the function focus of R down yet and am still hard coding things I don't have to.
